1. Introduction

The RAAWA (Request for Authority to Access Work Area) Generator is a professional document automation system designed specifically for telecommunications field operations. It streamlines the process of creating multi-site RAAWA forms, reducing manual effort and eliminating documentation errors.

1.1 Purpose

This manual provides comprehensive instructions for installing, configuring, and using the RAAWA Generator application. It covers all features from basic site selection to advanced batch processing and conflict resolution.

1.2 Key Benefits

- Generate complete RAAWA forms in seconds
- Eliminate manual data entry errors
- Handle unlimited sites with automatic batching
- Automatic signatory routing based on territory
- Professional, print-ready Excel output

2. System Requirements

Component	Requirement	Recommendation
Operating System	Windows 10/11, macOS, Linux	Windows 10 or later
Python Version	3.7 or higher	Python 3.9+
RAM	2 GB minimum	4 GB or more
Storage	100 MB	500 MB
Internet	Not required	Optional for updates
Browser	Modern browser	Chrome/Firefox/Edge

3. Installation Guide

3.1 Quick Installation

Double-click the run_app.bat file to automatically install all dependencies and launch the application. The batch file will:

1. Check for Python installation
2. Install required packages (Streamlit, Pandas, OpenPyXL)
3. Launch the web interface
4. Open your browser automatically

3.2 Manual Installation

If automatic installation fails, follow these steps:

1. Open Command Prompt or Terminal
2. Navigate to the application folder
3. Run: `pip install -r requirements.txt`
4. Run: `streamlit run app.py`
5. Open `http://localhost:8501` in your browser

4. Quick Start Guide

Step	Action	Time
1	Select sites from database	1-2 minutes
2	Enter scope of work	30 seconds
3	Add personnel (manual or database)	1-3 minutes
4	Click Build RAAWA Spreadsheet	5 seconds
5	Download generated files	10 seconds

Pro Tip: For best results, prepare your site and personnel databases before starting the application.

5. Detailed Features

5.1 Unlimited Site Selection

Select any number of sites from your database. The system automatically handles batch processing when exceeding 10 sites per signatory group.

5.2 Automatic Conflict Resolution

Detects and separates sites from Territory 7 and Territory 8 automatically. Also separates different Facility Managers into appropriate RAAWA files.

5.3 Personnel Management

Three input methods: Manual entry, database loading, or mixed mode. Search and filter capabilities for quick personnel selection.

5.4 Smart Batching

Automatically splits site groups into multiple RAAWA files when exceeding 10 sites, ensuring compliance and manageable document sizes.

5.5 Professional Output

Generates perfectly formatted Excel files with automatic font sizing, proper alignment, and print-ready layout.

5.6 Session Management

Persistent data across navigation, allowing you to switch between Main Generator and About page without losing progress.

6. Step-by-Step Instructions

6.1 Site Selection Process

- Navigate to Step 1: Site Selection
- Use the search box to find PLAIDs
- Select sites from the dropdown list
- Review selected sites in the preview table
- Check the Generation Plan for expected output
- Expand the breakdown to see file distribution

6.2 Scope of Work Entry

Enter a detailed description of the work to be performed. The scope will appear on every generated RAAWA form and will automatically include batch indicators when multiple files are created.

6.3 Personnel Addition

Manual Input Mode: Type personnel information directly into the form fields.

Database Mode: Search and select from pre-loaded engineer/technician database.

Mixed Mode: Combine database selection with manual entries for maximum flexibility.

7. Advanced Features

7.1 Automatic Database Integration

The system automatically loads three databases: • Globe FO Engr Contact_Vendor.xlsx - Site information • Requisitioner.xlsx - Territory-specific requisitioners • EngrTech.xlsx - Engineer/Technician personnel database

7.2 Smart File Naming

Generated files follow a consistent naming convention:

```
RAAWA_Territory[#]_[FacilityManager]_[BatchInfo]_[FirstPLAID].xlsx
```

7.3 Conflict Detection

The system automatically detects: • Territory conflicts (Territory 7 vs 8) • Multiple Facility Managers in same request • Generates separate files for each unique combination

8. Troubleshooting

Database Files Not Loading

Ensure all Excel files are in the same folder as app.py. Check file names match exactly.

Missing Personnel Database

The system works without EngrTech.xlsx but features will be limited. Create the file with columns: Name, Company, ID No

Excel Template Error

Verify MIN591__MANUAL RAAWA_APPLICATION_June8,2026.xlsx exists and is not corrupted.

Port Already in Use

Close other Streamlit apps or change port in the batch file using --server.port 8502

Download Button Not Working

Clear browser cache or try a different browser. Use Chrome for best compatibility.

9. Best Practices

- **Prepare Databases in Advance:** Keep your site and personnel databases updated before generating RAAWAs.
- **Review Generation Plan:** Always check the breakdown before building to understand how many files will be created.
- **Use Database Mode:** For frequent users, maintain EngrTech.xlsx for faster personnel selection.
- **Batch Large Requests:** The system handles batching automatically, but review each batch for accuracy.
- **Validate Output:** Always open generated Excel files to verify content before distribution.
- **Keep Template Updated:** Maintain your Excel template with the latest company branding and requirements.

10. Support & Contact

Developer: John Carlo Rabanes

Role: OLT Rollout Engineer

Phone: 09669343065

Version: 2.1.0

10.1 Feedback and Feature Requests

We welcome your feedback and suggestions for improvement. Please send feature requests or bug reports via email. Include screenshots and detailed descriptions when possible.

10.2 Version History

v2.1.0	June 2026	Unlimited sites support, auto-batching, enhanced UI
v2.0.0	June 2026	Added About page, professional design, database integration
v1.0.0	May 2026	Initial release with multi-site support

Thank you for using RAAWA Generator. This tool is designed to make your field operations more efficient and error-free. We continuously work to improve it based on user feedback.
